29 May 1974

MEMORANDUM FOR: Mr. Harry E. Fitzwater, D/OJCS

SUBJECT : Use of TI733 Printers for CONTEXT Test

1. The IHC, IC Staff and NSA will conduct a 90 to 120 day computer-driven conference-text-editing (CONTEXT) experiment beginning the early part of July.

2. The experiment will consist of tying three intelligent CRT terminals together to provide a teleconferencing network. Each of the CRT terminals (Incoterm) will have a floppy disk and a printer connected to it. In addition, secure grey telephones will enable the participants to talk to each other directly during the test conferences.

25X1

4. The Texas Instrument 733 Read Only printer is compatible with the Incoterm equipment and would provide adequate printing capability for the test.

5. Therefore, I request that OJCS provide IHC with three TI733 printers for the duration of the CONTEXT test beginning in early July. Two of these printers will be located with the two Incoterm terminals here at Headquarters. The third printer will be located with the Incoterm located at NSA. All three printers will be returned to OJCS at the end of the 90 to 120 day test.
